Previous research has demonstrated that psychological factors may play a role in disability retirements. The purpose of this study was to investigate whether psychological factors such as personality were related to disability retirements from the air traffic control specialist (ATCS) occupation.

SqEME® is an open standard for developing a process-centred architecture of an enterprise. It may be reproduced freely by any organization wishing to use it to develop a governance structure on the quality of their business processes. SqEME® Process Management is a method that facilitates discussion of the design of the organization, in a subtle but unambiguous way. Processes have to hold a prominent place in observing organizations: how are the different parts of the organization tuned to each other and how does adequate communication take place? SqEME® as a methodology views processes from four different perspectives. SqEME® calls these 'windows', by means of which one seeks for the Constitution, Chemistry, Correspondence and Construction of the enterprise. SqEME® is the result of more than twenty years experience with the management of business processes within various organizations. SqEME® has been applied successfully in industry (chemistry, automotive, construction, paper), in the business sector (IT service, healthcare), in the non-profit sector, and in public companies such as the Prosecution Counsel, County Councils and local authorities. This book is particularly aimed at professionals who are involved in the change process within process-driven organizations. Anyone wishing to familiarize themselves with process-centred thinking will be pleased to find that this book adopts an innovative, yet practice-proven approach. The SqEME® Foundation is a platform for discussing the method and its application, where insights into the basic assumptions and backgrounds are shared: www.sqeme.org.
